

What's in a Number?

Well, a lot for CPCA members. CPCA recently published a report containing a process forecast to 2020 along with actual regional Canadian data on:

Differential Pressure & Abs./Gauge Pressure
Temperature Transmitters & Sensors
Electronic & Mechanical Flow
Level
Gas & Liquid Analytical
Process Control Valves & Valve Actuators and Positioners

It includes a detailed report on the impact of the oil and gas slowdown along with markets expected to grow over the coming years. While the drop in Oil & Gas and Mining & Minerals spending resulted in a 4% point drop in the PI&A annual growth rate in 2015 and depressed the annual growth rates throughout the period, overall the Canadian process industries are positioned for growth over the forecast period. A detailed analysis (of the forecast by product, by region and by industry) is included in the 51 page report.

This is an example of electronic flow data (using fictitious numbers) that is

provided. There isn't a more thorough analysis of the process market available anywhere to help companies make the best informed strategic decisions.

Want the actual data? The full report can be purchased for \$2,500 for non-members and is provided free of charge to members. Contact cpca@cpca-assoc.com to get more information. All new members will also receive a discounted rate at next year's AGM.
